SVN Commands

These are my personal notes on SVN.

Basic Commands

Command	Description
svn checkout <URL> ex: svn checkout https://svn.jmehan.com:8443/svn/PROJECTS/ibrewmasterExtractor	Checkout repo
svn status --no-ignore	Show status of all files
svn status --no-ignore |grep ^?	Show un-versioned files
svn add <folder_or_file>	Add files for commit
svn revert --recursive <folder_or_file>	Revert an add
svn delete <folder_or_file>	Remove files
svn commit	Commit changes to svn server.
svn update	Pull changes from svn server
svn revert <file>	Revert changes to a file
svn log	Display logs for the current folder. Do svn update first.
svn import -m "Comment" <FOLDER> <REPO>/<FOLDER> ex: svn import -m "Node Projects" node https://svn.jmehan.com:8443/svn/PROJECTS/node	Import a folder into your repository After importing, you will need to checkout the project.
svn rm REPO_URL/project ex: svn rm https://svn.jmehan.com:8443/svn/PROJECTS/restTest	Remove a project from SVN
`svn st | grep ^! | awk '{print " --force "$2}' | xargs svn rm`	Remove all locally deleted files.
svn st | grep ^"?" | awk '{print " --force "$2}' | xargs svn add	Add all new local files.
