

Boler Axle Replacement

Overview

My axle is over 50 years old. It might be time to replace it.

Replacement Axle

From Ian's web site, he recommends the following axle:

Replacement Axle Specifications

Dexter #9: 2000 lb – 2200 lb ~~with brakes~~

Bolt circle: 5x4.5

Start angle: 10 deg up

Bracket type: Low Profile (if extra ground clearance needed use **high profile brackets**)

Bracket spacing (outside to outside frame): 48

Hub face to Hub Face: 63

NOTE: Double check all measurements on your axle

Observations

It appears that my axle is welded to the frame. I would need to cut the old axle off and find a new way to mount a new axle.
