

Using Node

Creating a application locally

Add dependencies

```
> npm install lodash
```

```
> node app.js
```

Creating your own package

```
> mkdir myApp
```

```
> cd myApp
```

```
> vi package.json
```

```
{
  "name": "myApp",
  "version": "1.0.0"
}
```

Add dependency

```
> npm install lodash --save
```

Our package.json will now have the dependency:

```
{
  "name": "myApp",
  "version": "1.0.0",
  "dependencies": {
    "lodash": "^4.17.10"
  }
}
```
