

PetSafe Healthy Pet Feed - Repair

Problem

F02 Error

<https://www.amazon.com/ask/questions/Tx2IVHW8CWHHM6Q>

I own this feeder. I repair small electronics. The F02 error is from the DC motor. Yes new batteries may bring it back to life but I had to remove the motor and hit it with 9v then rework it. They are cheap motors but can be saved. Cleaned and re oiled the gear works. All fixed.

I just ran into this issue today, almost four years after initial purchase. The issue seemed to be that over the past couple of years, some buildup of food dust and crumbs and gotten into everything. A nice bit of vacuuming after disassembly, along with some dusting, helped bring the feeder back into operation. Hope this helps!
